Online Inventory Management Tools

Our electronic service management tools are designed to provide online access to your data, 24 hours a day, seven days a week, with key customer-to-carrier touch points and a wide choice of entry methods – from web-based desktop to system-to-system access through your own applications.

Online Service Management Tools: The Verizon Enterprise Center is a useful and environmentally-friendly online service management tool portal that helps you do business with us on your terms – when and where you need to. You can use the Center to place orders, view and pay invoices, create trouble tickets and analytical reports, and monitor and manage your communications services. The Center provides access to near real-time information so you can make informed decisions about your domestic and global networks.

Also, with Verizon Business and Verizon Wireless united on the same portal, large businesses and government agencies experience a seamless online experience with single sign-on to their information via the Center.

System Integration to Service Management Tools: eBonding services provide a seamless system-to-system connection that integrates your enterprise activities with our infrastructure benefiting you through automation that makes processes more efficient, allowing you to handle large numbers of transactions, and providing you with access to data right from your desktop.

Verizon Enterprise Center Dashboard

When it comes to managing the performance of your networks across the country or around the globe, you need quick data access. Verizon Enterprise Center Dashboard is our customizable, network monitoring tool that gives you a comprehensive view of your business landscape from the big picture down to the details.

Eligible Verizon Business voice, IP, and data customers can manage their network resources more efficiently through a single overview of network alarms, trouble ticket status updates, network availability trends, and scheduled network maintenance event notices.

You even can receive severe-weather advisories via the National Oceanic and Atmospheric Association (NOAA) right on your Dashboard to help you plan for contingencies. This feature provides continual updates and you also can zoom in on the map to view specific information for individual locations.

Fault Management

- Identify network concerns in a timely manner with timely network alarms
- Receive quick updates and navigate between your graphical network view and integrated repair functions with one click
- Analyze ticket trends and track Service Level Agreements (SLA) performance through powerful visual reports and drill-down capabilities
Performance Management

- Obtain data to make informed decisions via network utilization summaries
- Analyze network performance with comprehensive, auto-generated, and unique ad-hoc reports
- View SLA reporting and conformance trends

Configuration Management

- View your service and product topology with network inventory maps
- Receive scheduled maintenance event notices and impacted circuits/facilities information
- Receive timely updates and navigate between your graphical inventory view and integrated order functions in one click

Features

The Verizon Enterprise Center portal was designed for easy navigation and provides you with several important business functions to help streamline your business.

**Support**

Verizon Enterprise Center delivers customizable business lifecycle, operations, and analytics support for your enterprise needs.

**Business Lifecycle Support**

Verizon Enterprise Center makes an eBusiness solution possible that will provide support throughout your business lifecycle. These tools extend beyond network management to include customer premises equipment (CPE), orders, billing, and inventory, to name a few.

- Network management
- Order entry and tracking
- Billing – view and payment
- Entitlement management
- Inventory visibility

**Operational Support**

To give you better command and control of your business operations, our operational support tools allow you to monitor your network, self-test circuits, and — for some applications — eBond your systems to ours.
- Network performance monitoring
- On-demand network and bandwidth control
- Network self-test capabilities
- Direct bonding

**Analytical Support**

Diagnostics can offer insights you need to understand your business better. Our analytical support provides tools to evaluate performance, customize bill reports, use forecasting models, and more.

- Link performance to Service Level Agreements
- Contract renewals
- Customized billing reports
- Forecasting and modeling tools - including "What if?" analysis

**eBonding**

eBonding is a system-to-system interface that enables true end-to-end business process integration between a customer's internal applications and Verizon's back-office systems for issue, asset, order, and network management.

eBonding is primarily for customers with a high volume of tickets and orders per month that would gain the most operational efficiencies from fully automating their business transactions with Verizon.

eBonding services currently supported include:

- Incident Management
- Circuit Testing
- Network Alarms
- Maintenance Advisories
- Order Management
- Inventory Reporting

Customers can select eBonding options from this list tailored to meet their distinct business needs and available resources.

**eBonding for Incident Management**

eBonding for Incident Management provides for automated trouble ticket case exchange between a customer's help desk application and Verizon.

</table>
| **Test**                | • Specify monitor duration  
  • Check the status of the test  
  • High level analysis of results  
  • Proactive action taken on failed test results | • Circuit testing allows the customer to investigate the fitness of a circuit without opening a trouble ticket. |
| **Circuit Test**        | • Intrusive test that takes circuit down for least duration  
  • Automatically opens a Priority 1 ticket in ETMS and enters test results in the ticket for failed tests when an outage is detected and there are no open Priority 1 tickets opened against that circuit. | Network efficiencies  
  • Improved time-to-repair by proactively and more efficiently identifying and reporting network troubles to Verizon.  
  • Greater network availability resulting from improved time-to-repair represents real user productivity gains to the customer.  
  Greater visibility  
  • Greater visibility into circuit issues will allow the customer to assign tickets to the appropriate trouble resolution group more effectively. Test results can be stored offline for benchmarking and analysis reporting for improved network planning. |
| **eBonding for Network Alarms** |                                                                                                   |                                                                                             |
| eBonding for Network Alarms delivers circuit, switch and managed device alarms and alarm milestones in near real-time directly to the customer's network management tool. Through this service customers will benefit from network alarm and trouble ticket correlation capabilities available through the award winning Verizon Integrated Management Platform for Advanced Communications Technologies (IMPACT). |                                                                                             |
| **Feature**             | **Description**                                                             | **Benefit**                                                                                 |
| One-way, "push" interface | Transactions are initiated by Verizon                                       | Verizon Enhanced Visibility  
  • Near real-time visibility into network health and operational status  
  • Monitor network events as they are worked.  
  Operational Efficiencies  
  • Reduction in customer time spent monitoring network  
  Improved customer |
<p>| Publish New Alarms and Alarm Milestones | Verizon will proactively publish new alarms and alarm status changes/milestones updates, from highest severity to a clear state, to the customer's network management tool in near real time |                                                                                             |
| Alarm and Ticket Correlation | Receive details of the trouble tickets associated with network alarms. This includes automated and manual tickets. |                                                                                             |
| Alarm Properties       | Detailed alarm properties attributes for each individual alarm condition for trouble shooting information purposes. Information provided |                                                                                             |</p>

</tbody>
</table>

**eBonding for Maintenance Advisories**

eBonding for Maintenance Advisories allows customers to query Verizon’s MASTARS (Maintenance Activity Scheduling Tracking and Reporting System) database for maintenance events that might impact their Verizon services. Verizon can also proactively publish maintenance event details to the customer’s help desk or network management system.

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
<th>Benefit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Customer has the choice of messaging implementation: either two-way (&quot;push/pull&quot;) publishing or one-way (&quot;pull&quot;) customer initiated messaging.</td>
<td>With two-way communications customers can query MASTARS for maintenance events that impact their Verizon services and Verizon can proactively publish these events to the customer’s help desk or network management application. One-way publishing is a communications mechanism where the customer initiates all sessions. In this case they would initiate the MASTARS queries. One-way communications may be easier to implement for customers building their own basic application interface, but does not provide for event driven, proactive publishing from Verizon.</td>
<td>Flexibility of integration ▪ Verizon offers multiple implementation options to accommodate the customer's resource availability and requirements.</td>
</tr>
<tr>
<td>Search Maintenance Requests</td>
<td>Customers can query MASTARS for a list of events by: ▪ Impacted Equipment ID (ex: Circuit ID) ▪ Maintenance Start / Stop Time ▪ Status (WA: Waiting for approval, P:</td>
<td>Improved customer experience ▪ Customer leverages existing application(s) to view and manage the availability of Verizon</td>

- Full Message | To manage their networks more effectively with advanced knowledge of service-impacting maintenance events |  

### eBonding for Order Management

Order Management allows customers to electronically submit service requests and obtain detailed service order status reports for a wide range of products.

**Feature** | **Description** | **Benefit**
---|---|---
| Ability to submit orders for new service requests  
Customer systems may submit orders requesting new Voice, Data and Internet services as well as CPE.  
Service features include:  
- Create order for new service request  
  - Support for more than 70 services in the Verizon product portfolio  
- Get Product List to see what products are supported  
- Address Validation | Labor efficiencies  
- Eliminates re-keying  
- Avoids "swivel chair" and faxes or e-mails  
- Immediate notification of issues  
Simplified workflow  
- Leverages existing application interfaces and databases |  
| Request order status details  
Provides customer with current state and status of the service request including: Milestones – These are the key activities which describe the movement of an order to | Automates messaging exchange  
Great visibility |
## Feature | Description | Benefit
--- | --- | ---
 | completion including loop installation date, service activation, billing start date, and much more. Jeopardies – These are alerts to conditions that may prevent an order from being fulfilled such as incomplete order, incorrect billing information, missing contract information, and much more. Order Attributes – These include customer billing information, order, product name, order tracking number, order status, and much more. | Customer will have direct access to the most up to date order status information for improved asset management. 

Submit MACD order types (moves, adds, changes, deletes) | Customers may update existing services including moves, adds (i.e., more circuits to an existing trunk), changes and deletes. | 

Modify order requests | Customer may Supplement Order to allow changes to previously submitted requests or Cancel Order to withdraw the request | 

eBonding for Inventory Reporting
